

Music Publishing

Position: Information Technology (IT) Intern
(F1 Visa Required for all Int'l students)

Company: RightsFlow LLC

Location: New York, NY

Website: www.rightsflow.com

RightsFlow provides professional services and music licensing solutions to leading companies in the media and entertainment space. We are looking for someone to help develop and advance the technology infrastructure involved in licensing and administering mechanical royalties.

The ideal candidate is someone with an extensive drive and desire to work within the music licensing arena with some knowledge of database administration and programming. He/she will be involved in the mechanical licensing division of the company and will work with the licensing and royalties' team to implement data communication efficiencies in addition to helping develop database driven web pages for client services and reporting. This is a great opportunity for someone to learn the specifics of building a top notch music licensing administrations business, learning from expert industry executives in the field. Your internship experience with RightsFlow will provide you with hands-on developing experience in a dynamic, fast-paced and fun atmosphere.

Responsibilities:

- Develop new technologies and efficiencies within the RightsFlow proprietary music licensing & royalties database
- Program and build database driven web pages
- Operating ETL data integration technology.
- Ensure proper configuration and security on all server environments
- Troubleshoot data ingestion issues and develop methods for automating and streamlining processes
- Research and evaluate new and applicable technologies.
- Participate in technology discussions and meetings

Required Experience:

- College degree
- Preferred majors: Computer Science, Computer Engineering (or related)
- This position requires a proven track record of providing practical technical solutions to business problems
- Some experience building database driven applications and working with database management systems such as MySQL is required
- Proficient technical skill set which may require writing SQL queries, PHP scripting, and working with XML files and schemas
- Linux, C/C++, Java, Perl, AJAX, and/or Ruby on Rails skills a big plus
- Desire to work in the music industry
